

C200 Roof Restoration System

Peace of mind for a decade +

At Auckland Commercial Coatings, we're proud to be an approved and accredited applicator of the NZ Made Cohe Roof Restoration System.

With over 500,000m² already restored across NZ, the C200 system is proven to deliver long-lasting waterproofing, protection and performance.

Together with Cohe, we provide complete confidence - from inspection & specification, through to installation & insurance-backed warranties.

Why choose the C200 system?

High solids & non-permeable

Delivers a minimum 600 micron dry film thickness across two body coats.

Enhanced with polyurethane acrylic resin for maximum durability.

54% solids content for long-term performance.

Waterproof protection, even under ponding conditions.

Anti Microbial & Anti Corrosive

Silver ion additives combat moss, mould, and lichen.

Zinc-rich formulation protects steel substrates against corrosion.

Suitable for potable water collection once fully cured.

High Flexibility & UV Resistant

Elongation of 275%, maintaining flexibility and crack resistance.

Built-in **UV absorbers** and advanced polymers defend against NZ's harsh sun.

Resistant to **yellowing and age crazing** for a longer service life.

A system backed by partnership

As accredited applicators of Cohe systems, we deliver more than just a coating - **we deliver peace of mind.**

Every roof we restore comes with a **10-year warranty** covering adhesion, chalking, fading, and, most importantly, **guaranteed waterproofing protection.**

7-Step Roof Restoration Process

1. Apply Cohe Quick Clean.
2. Pressure wash to prepare substrate.
3. Tighten fixtures, if required.
4. Apply Cohe Rust Buster on affected areas.
5. Apply Cohe Seamtape/Geofabric to risk areas.
6. Apply Cohe Liquid Rubber to penetrations.
7. Apply two body coats of Cohe C200 to achieve a 600 micron membrane.
